GD: Price Updater Pro - How to use

Overview:

The GD: Price Updater Pro application helps efficiently edit and manage product prices and compare-at prices in a Shopify store.

Navigation Overview:

The application currently includes the following navigation routes:

- Import Product Prices
- Export Product Prices
- Subscription
- How To Use

Application Usage Flow & How It Works:

1. Export Product Prices

- Start by exporting your current product prices to an Excel file.
- Go to the Export Product Prices page.
- Click the Export Product Prices button.
- An Excel file containing your product SKUs, current Prices, and Compare-At Prices will be downloaded.

2. Edit the Excel File

- Open the downloaded Excel file and make your price changes.
- ⚠ IMPORTANT: Do not remove the SKU column. The app uses the SKU to identify which product to update.
- Update the **Price** column with your new prices.
- Update the **CompareAt Price** column if needed.
- To remove a Compare-At Price, set the value to **null**.
- You can delete rows for products you don't want to update, or simply upload an Excel file containing only the rows you wish to update.

3. Import Product Prices

- Upload your edited Excel file to apply the changes to your store.
- Go to the **Import Product Prices** page.
- Click the **Import Product Prices** button.
- Select your edited Excel file.
- The app will process the file and update your product prices in the background.
